Influence of slow-release theophylline on the clinical pharmacokinetics and pharmacodynamics of ketoprofen in healthy volunteers. The influence of a slow-release theophylline tablet on the absorption rate, the pharmacokinetics and pharmacodynamics of ketoprofen, and the influence of theophylline on the anti-inflammatory action of ketoprofen were evaluated in a randomized, double-blind, two-way crossover study with 14 healthy subjects. Two identical doses of ketoprofen (50 mg i.v.) were given on two different occasions, with and without theophylline. Plasma concentrations of ketoprofen were determined by high-performance liquid chromatography and the anti-inflammatory action of ketoprofen was measured by measuring the leucocyte migration inhibition factor (LMI) in the ex vivo whole-blood serotonin release assay. Peak concentrations of ketoprofen were significantly faster (p < 0.05) when given with theophylline. The role of biologics in chronic obstructive pulmonary disease. The use of biological agents in the treatment of chronic obstructive pulmonary disease (COPD) has been increasing over the past decade, and has coincided with the growing evidence base demonstrating their potential to improve clinical outcomes, predominantly trough forced expiratory volume in one second (FEV<sub>1</sub>). As a result, it is now generally accepted that biological agents may have a role in the management of COPD. However, treatment guidelines for COPD remain focused on inhaled corticosteroids and long-acting beta(2)-agonists, and, in this scenario, it is difficult to predict the role that biologics may play in the future. Randomised controlled trials have shown that a number of biologics are effective in this patient group; however, studies are often limited in duration, are
